

# Fact Sheet

## Trade Waste Pre-Treatment Inspections

Pre-treatment devices such as grease arrestors, silt arrestors and lint arrestors ensure the removal of substances and materials that are potentially harmful to people, the environment and sewerage infrastructure.

Redland City Council requires an assessment of these arrestors to be done at least every 10 years to ensure they are functioning adequately.

### Important points:

- The assessment must be done by a registered plumber or drainer.
- The enclosed form is to be used for the assessment.
- The assessment should be done when the arrestor is empty – preferably at the time of a pump-out.
- Photographs of the arrestor must be included with the report.
- Submit the report within 10 business days of conducting the assessment.
